

Origin Digital Brand Style Guide

Apply this style to every presentation unless explicitly directed otherwise. The goal is visual consistency: any deck built from an outline plus this guide should look like it came from the same template.

Color values follow the official brand sheet — see [origin-brand-colors-hex.md](#) for the source palette.

Canvas

- 16:9, **720 × 405 pt**
- Safe content area: 29 pt left/right, 18 pt top, 36 pt bottom (leave room for the footer/logo)
- Two background modes: **Light** ([#F4F3EF](#), Gray 100) for content-heavy slides, **Dark** ([#222F2E](#), Charcoal) for title, section dividers, and closing slides

Color Palette

Role	Hex
Logo Green (primary accent)	#ADFF26
Logo Green @ 30% alpha (oversized numerals on dark)	#ADFF26 with <code>alpha="30000"</code>
Charcoal background (dark mode)	#222F2E
Logo Black — component dark fill (cards, code blocks, tables) and primary text on light	#141712
Closing-slide nav-card fill (lifted charcoal)	#34433F
Off-white background (light mode) — Gray 100	#F4F3EF
Light card / row fill — Gray 300	#E3E2D9
White (text on dark, card highlight)	#FFFFFF
Secondary/muted text on light — Gray 500	#77766E
Secondary/muted text on dark	#9B9B9B
Negative / trade-off / error — Fire	#FF4B00
Informational — Blue	#0076FF
Warning / caution — amber (derived; no brand equivalent)	#F5A623

Contrast rule (critical). Logo Green [#ADFF26](#) is a bright lime. It reads cleanly **as a fill, accent strip, or text on a dark surface**, but it is **unreadable as text on light/near-white backgrounds**. Therefore:

- For "green" text on a light slide (headings, identifiers, the wordmark), substitute **Logo Black** [#141712](#).
- Filled green elements (tag pills, number squares) take **dark** [#141712](#) **text**, never white.
- Green text is only allowed on dark fills ([#141712](#) / [#222F2E](#)).

Accent palette. For categorical differentiation only, you may use the sanctioned brand accents: **Navy** #2F3060, **Purple** #A414C2, **Fire** #FF4B00, **Blue** #0076FF, **Brown** #A66E33, and neutral **Green** #DBDF82. Use them to distinguish categories (e.g., workstreams, status, data series) — never as decoration. For semantic meaning keep it simple: **green** = **positive**, **Fire** #FF4B00 = **negative/error**, **Blue** #0076FF = **informational**, **amber** #F5A623 = **caution**. Do not invent colors outside this list.

Typography

Font family: **Calibri** throughout. Bold for titles, headers, identifiers, and emphasis; regular for body. Use a monospace-feeling treatment (Calibri bold in green, on a dark fill) for code identifiers — do not switch font families.

Text role	Size	Weight	Color
Section-divider numeral ("01")	96 pt	bold	#ADFF26 @ 30% alpha
Section-divider title ("Architecture")	52 pt	bold	#FFFFFF
Title-slide main title	34 pt	bold	#FFFFFF
Title-slide right-pane heading	22 pt	bold	#FFFFFF
Content-slide title	24 pt	bold	#141712
TOC heading ("Table of Contents")	28 pt	bold	#141712
Card / section heading (within slide)	13–16 pt	bold	#141712 on light; #ADFF26 only on a dark fill
Body text	11–12 pt	regular	#141712 light / #FFFFFF dark
Code identifier / monospace label	11–13 pt	bold	#ADFF26 (on dark fill only)
Breadcrumb ("02 / Backend")	10 pt	regular	#77766E
Section-divider sub-topic strip	14 pt	regular	#ADFF26
Logo wordmark "◇ ORIGIN"	14–20 pt	bold	#ADFF26 on dark; #141712 on light
Closing footnote / metadata	10 pt	regular	#9B9B9B

Minimum body size is 11 pt. Do not go below 10 pt for any text, including footnotes.

Persistent Brand Elements (on every slide)

- Left accent strip** — vertical rectangle, #ADFF26, 9 pt wide (13 pt on dark slides), full slide height, at `left=0, top=0`. Never omit, never recolor.
- ORIGIN wordmark** — "◇ ORIGIN" in 14 pt bold. Green #ADFF26 on dark slides, Logo Black #141712 on light slides. On content slides, place bottom-right (`left≈562, top≈374, width≈144`). On title / section / closing slides, place top-left of the dark area, 20 pt.
- Title divider line** — on content slides, a thin horizontal line under the title/breadcrumb at `top≈76`, spanning content width. Color: #E3E2D9 (light) or #34433F (dark).

Slide Templates

These are composable building blocks. Pick whichever fits each outline item — no required ordering beyond "open with a Title slide and close with a Closing slide." Insert section dividers when the outline groups topics; skip them for short decks.

Template A — Title Slide (dark, split-pane)

- Full dark #222F2E background
- **Left pane** (~302 pt wide): ORIGIN logo top-left (20 pt, green), deck title 34 pt bold white, subtitle 16 pt muted, thin green divider, then 2–3 lines of body context (audience, presenter, scope), and a 12 pt date/metadata line near the bottom.
- **Right pane** (~374 pt wide, starting at **left=324**): section/feature heading 22 pt bold white, optional one-line subtitle, then a 3×2 or 3×3 **tag pill grid** (architectural components, tech stack, agenda preview), followed by 2–4 lines of supporting text separated by thin horizontal lines.

Template B — Table of Contents (light)

- Light background, "Table of Contents" title 28 pt bold, green underline below
- **2-column grid of section cards.** Each card: light fill #E3E2D9, with a dark #222F2E square on the left containing the section number ("01") in 24–28 pt bold green. To the right: section name 14 pt bold dark, then a muted gray sub-topic list 10 pt separated by middle dots.
- 4–6 sections fit comfortably. If more than 6, switch to a 3-column grid or split across two TOC slides.

Template C — Section Divider (dark)

- Full dark #222F2E background
- Oversized numeral ("01") at **left=36**, **top=36**, 96 pt bold, green at 30% alpha (so it reads as a watermark)
- Section title at **left=36**, **top=130**, 52 pt bold white
- Sub-topic breadcrumb at **top=220**, 14 pt green, items joined by · (middle dot with spaces)
- ORIGIN wordmark bottom-right

Template D — Content Slide (light, the workhorse)

Light #F4F3EF background. Top zone is always: title 24 pt bold at **top=18**, breadcrumb "0N / Section" 10 pt at **top=55**, divider line at **top=76**. Content begins at **top=85**.

Within the content zone, compose using the **components below**. Common patterns:

- **Two-column grid** (~324 pt each, 14 pt gutter at **left=29** and **left=367**) — use for parallel content: naming convention vs description rules, benefits vs trade-offs, key components vs auth flow.
- **Three-column grid** (~210 pt each, ~14 pt gutter) — use for numbered step cards.
- **Four-column grid** — use for tag/tech-stack chips at the top of a slide.
- **Full-width table** — use for hierarchical lists (service→description, identifier→purpose).
- **Diagram + sidebar** — left two-thirds for boxes-and-lines diagram, right third for a list of related items.

Reserve **top=374** and below for the footer/logo — do **not** extend content into that band. If content runs past **top=355**, split the slide.

Template E — Closing / Thank You (dark)

- Full dark background
- "Thank You!" 36 pt bold white at top-left, with a thin green divider below it
- 1–2 lines of deck metadata ("Weil MCP Platform · Technical Documentation · April 2026") 14 pt, then a sub-line 10 pt muted
- Row of 4–6 **section nav cards** along the bottom (**top=310, height≈36**): dark #34433F fill, section number + name in 11 pt, gap of ~10 pt between cards

Template F — Resource / Links Slide (light, optional)

- Standard content header (title + breadcrumb + divider)
- 2-column bulleted hyperlink list with bold column headers
- Use this for "Helpful Links", "References", "Further Reading"
- Keep the bottom half empty or add a short metadata line; do not stretch links to fill

Component Library

Reuse these on any content slide. Sizes are starting points — scale to fit content width.

Card-with-green-tab (#141712 fill, 5 pt green top bar OR 4 pt green left bar):

- Use the **top-bar variant** for prominent grid cards (numbered step cards, feature cards): card 216×150 pt, top bar full-width × 5 pt, large green numeral inside.
- Use the **left-bar variant** for compact row items in a list (tools, env vars, code identifiers): row 324×35 pt, left bar 4 pt wide.

Code / identifier row (dark #141712 fill, 4 pt green left bar):

- Green monospace-style identifier 11 pt bold left, white description 11 pt right or below
- Used for tool catalogs, environment variables, configuration keys

Numbered step card (three-card row at top of a content slide):

- Card 216×150 pt, dark #141712 fill, 5 pt green top bar
- Large green numeral (1, 2, 3) 24 pt bold inside, then green bold title 13 pt, muted sub-label 10 pt, body text 11 pt white

Step row (numbered list, vertical):

- Row 374×45 pt, dark fill, 26 pt green square on the left holding the number 14 pt bold **dark #141712** (the green square is bright — number text must be dark, not white)
- Bold title 12 pt + body 11 pt on the right

Benefit row / Trade-off row (two-column list):

- Light row fill: #F0FBD9 (benefits, pale lime) or #FFE4D6 (trade-offs, pale fire)
- 4 pt left bar: #ADFF26 (benefits) or #FF4B00 (trade-offs)
- Single line of 11 pt body text

Tag pill (used on title slide and at the top of tool-detail slides):

- 115×30 pt rounded rectangle

- Two variants: **filled** (green #ADFF26 fill, **dark #141712** bold text) for emphasized tags; **outlined** (dark #141712 fill, green outline + green bold text) for secondary tags
- 11 pt bold text, centered

Architecture / diagram boxes:

- 187×52 pt (compact) or 216×52 pt (wide) rounded rectangle, dark #141712 fill
- Green bold component name 13 pt on the first line, white description 11 pt on the second
- Connect with 1 pt green lines (#ADFF26) using right-angle paths only — no curves, no diagonals

Footer rule strip (full-width banner near the bottom):

- 662×45 pt, dark #222F2E fill
- Green bold label on the left (e.g., "Standard Verbs:"), middle-dot-separated items in white on the right
- Use for cross-cutting reminders that apply to the whole slide

Callouts:

- Amber #F5A623 left-bar + dark fill for warnings ("⚠ Do NOT use for...")
- Green-tinted bar for tips / key insights
- Always single-line; if longer, promote to a full row

Tables (hierarchical lists):

- Alternating row fills: white #FFFFFF and #E3E2D9
- First row highlighted dark #222F2E with green identifier + white description (marks the primary/recommended option)
- Row height 35–45 pt, 11 pt text, left-aligned
- No visible cell borders — separation comes from row fill

Section nav card (closing slide only):

- 126×36 pt rounded rectangle, #34433F fill
- Green section number 14 pt bold + white name 11 pt, both centered

Image Specifications

The reference deck is illustration-free, but the template supports images cleanly when used sparingly.

When to include images:

- Architecture diagrams (preferred: build with shapes per Template D, not raster) — use a raster image only when the diagram exists externally and re-creating it isn't practical
- Screenshots of UIs, dashboards, or tool output
- Product photography on a title slide
- Author/team headshots on a closing slide

When NOT to include images:

- Decorative stock photography behind text — never
- Logos other than ORIGIN inside the content area — partner logos go in a dedicated logo strip
- Background washes or hero photos under text

Placement zones (Template D content slides):

- **Right pane** (left=367, top=85, width=324, height=270) — default for a single supporting image alongside left-pane text
- **Full-width band** (left=29, top=85, width=662, height=200) — wide diagram or screenshot, with explanatory text below at top=295
- **Inline thumbnail** (width≤120, height≤90) — small icon or logo within a card or row

Sizing rules:

- Maintain source aspect ratio — never distort. Pass either width OR height, not both.
- Minimum size for screenshots: 240 pt wide (smaller is unreadable on projection)
- Maximum image area: 60% of the content zone. If an image is larger, give it its own slide.
- Image edges align to the 29 pt left margin or 367 pt column gutter — never floating mid-column

Treatment:

- **Frame:** wrap every photographic image in a 1 pt #141712 border. Diagrams and screenshots with white backgrounds get the same border so they don't bleed into #F4F3EF.
- **Background:** if an image has transparency, place it directly on the slide background. For photos, no drop shadow or rounded corners — keep the geometry square.
- **On dark slides:** add a 2 pt #ADFF26 accent on the left or top edge of the image (matches the card treatment); never frame in white.
- **Captions:** 10 pt italic #77766E, placed directly under the image, left-aligned to the image's left edge.

Logo strip (Template D, four-column):

- Four #FFFFFF cards each 144×62 pt, 4 pt green left bar, partner logo centered, 1 pt #141712 border
- Logos rendered at 80% of card height with a 20 pt internal margin

Architecture diagrams: strongly prefer building with native shapes (see Architecture / diagram boxes component) over inserting a raster image — it stays crisp, accessible, and editable. Only fall back to an inserted image when the diagram comes from an upstream tool (drawio, Lucidchart, Visio export).

Layout Assembly Guidance

Given an outline, pick templates per item, not by sequence:

1. **First slide** → Template A (Title)
2. **Outline item that's a section header / chapter** → Template C (Section Divider)
3. **Outline item that's a topic with details** → Template D (Content). Choose the inner grid based on the outline's substructure:
 - 2 parallel concepts → two-column grid
 - 3–4 sequential or peer items → three/four-column step or tag grid
 - Hierarchical list of items with descriptions → full-width table
 - One concept with a diagram → diagram + sidebar
4. **Outline item that's a list of links** → Template F (Resource)
5. **Optional second slide before the close** → Template B (Table of Contents) used as a recap
6. **Last slide** → Template E (Closing)

Rules that always apply, regardless of order:

- Every slide carries the left green strip and the ORIGIN wordmark
- Section dividers are optional but, if used, must precede every section's first content slide and must be numbered sequentially (01, 02, ...)
- Breadcrumbs on content slides must match the section divider number and name exactly (e.g., "02 / Backend")
- Density limit: a single content slide holds at most ~7 cards / ~7 table rows / ~5 step rows. If the outline item exceeds this, split it across two slides with the same title and append "(cont.)" or a sub-scope
- Never mix light and dark backgrounds within the same section's content slides
- Never use Logo Green as text on a light background (see the Contrast rule) — use Logo Black instead
